

CONFIDENTIAL

THE COUNCIL FOR TOBACCO RESEARCH - U. S. A.

February 18, 1966

MEMORANDUM

TO: The committee comprising Dr. Bing, Chm., Dr. Cattell and Dr. Jacobson.
FROM: Robert C. Hockett
SUBJECT: New grant application from Francis J. Haddy, M.D., Ph.D. - No. 536.

We enclose herewith, a new grant application from Dr. Francis J. Haddy, now of the University of Oklahoma Medical Center, who will become Chairman of the Department of Physiology at Michigan State University on July 1, 1966.

Dr. Haddy received a previous grant (#433) which was activated on July 1, 1964 and renewed on July 1, 1965 to complete the two-year plan he proposed originally. These grants were for \$31,010 and \$23,270 respectively. Our original commitment has thus been completed and no projection has therefore been made for our 1966-67 budget. The present proposal is therefore construed as a new one.

A progress report for the calendar year 1965 is enclosed.

This application is being distributed at present only to members of the committee but we plan to include it on the agenda for March 5-6.

R. C. H.

Personal Opinion: No visit to this project has been made by staff or board members during its two years and no evaluation of the smoke production techniques carried out. The reference to use of filter cigarettes is a bit disturbing. It seems to me that a conference and general evaluation review should be conducted before any new grant is made. Action at the May meeting would still anticipate the July 1st anniversary of the project. Hence, I would recommend deferring action until May, with arrangements for a staff or committee visit, or tentative action contingent upon the recommendations of a review committee.
